

Arts University Bournemouth

Brief

One Eighty were instructed to establish an accurate asset list for the client's facilities management function. Long periods of contract management changes had resulted in an inaccurate and incomplete asset register. This meant contract negotiations and appropriate services charges were difficult to establish.

Solution

One Eighty quickly mobilised a team to survey the campus and establish an accurate asset register for the client. This included physical site checks over a weeklong period, data comparison checks, building a new asset register and ensuring all mechanical services had relevant compliance information. The information gathered was managed via our 'digital twin' solution to ensure data could be accessed and managed as required.

Result

The client now has an accurate asset list for the site that can be used to effectively manage the portfolio. The 'digital twin' solution will help the client manage each asset throughout its life cycle and will negate the need to use valuable resources on information gathering.
